

Deval Panchal

Mobile & Full-Stack Software Engineer

devalp2401@gmail.com | linkedin.com/in/deval-panchal | github.com/DevalPanchal | devalpanchal.ca

SUMMARY

Software engineer with 5 years of full-stack development experience, currently leading a two-person team building enterprise applications at a regulated energy utility, and the solo developer of a live iOS app on the App Store. Builds cross-platform mobile in React Native and TypeScript and owns features end-to-end — architecture, implementation, CI/CD, store release, and post-launch iteration. Equally comfortable on the backend, from RESTful API and real-time data integration through production database ownership.

TECHNICAL SKILLS

Mobile: React Native, Expo, Expo Router, EAS Build & Submit, App Store Connect, TestFlight, NativeWind, RevenueCat, in-app subscriptions, cross-platform iOS/Android

Languages: TypeScript, JavaScript, C#, Python, SQL, HTML/CSS

Frameworks & Libraries: React, React Native, Next.js, Angular, SvelteKit, .NET 8 / ASP.NET Core, Node.js, Express

State & Data: Zustand, RESTful APIs, Supabase, Firebase, PostgreSQL, SQL Server, Power BI, DAX, ETL pipelines, OpenAI API integration

Cloud & DevOps: Azure DevOps (CI/CD pipelines), Google Cloud Platform, Docker, Git/GitHub, Supabase Edge Functions

Testing & Monitoring: Jest, Sentry, PostHog, XUnit

PROFESSIONAL EXPERIENCE

Software Developer | Ontario Power Generation

Aug 2024 – Present

Oshawa, ON · ReactJS, NextJS, Angular, .NET, SQL Server, Azure DevOps

- Lead a development team owning enterprise platforms within a ~\$600K application portfolio in the enterprise project applications group, serving both station and corporate users.
- Designed and delivered an automated workflow in the project management platform that eliminated manual overtime processing, enabling approximately \$300K in annual savings.
- Architect and develop Angular 18 and .NET 10 applications following Clean Architecture and CQRS patterns, integrating RESTful APIs and Azure AD authentication, with CI/CD pipelines in Azure DevOps automating build, test, and deployment.
- Develop reporting tools in SQL Server and Power BI used at the corporate level for performance monitoring, regulatory compliance reporting, and executive decision-making across the project portfolio.
- Serve as production database owner — accountable for data integrity, query performance tuning, backup and recovery strategy, and role-based access control across all enterprise project applications.
- Partner directly with business stakeholders to scope requirements and translate them into delivered features, running the work from intake through release without a dedicated product or QA layer.

Software Developer, Research Fellowship | Ontario Tech University

May 2023 – Oct 2024

Oshawa, ON · React, Node.js, Express, PostgreSQL, Docker

- Collaborated with a Ph.D. candidate on AI-driven language-learning methodologies, designing and building 2 experimental models evaluated by 30+ participants.
- Led data collection and user studies with 120+ participants across 3 demographics, measuring a 25% improvement in vocabulary retention.

Data Analyst | Ontario Power Generation

May 2022 – Sep 2023

Oshawa, ON · Python, SQL Server, Power BI, Power Apps

- Optimized SQL queries and managed ETL processes, achieving up to 98% runtime improvement on data retrieval.
- Built and scheduled stored procedures syncing 5+ dashboards processing 50,000+ data points, and led data modelling and architecture design for scalable reporting projects.

Full-Stack Developer | Ontario Tech University

May 2021 – Apr 2022

Oshawa, ON · React Native, Expo

- Built an augmented reality mobile application for language learning in collaboration with a research professor and graduate student, taking it from concept through a working build used in study sessions.
- Ran A/B testing sessions comparing AR-based language learning against a control method, administering the sessions and collecting the effectiveness data the research was based on.

MOBILE APPLICATIONS

Virtus — Habit Tracker | Solo Developer & Publisher

Live on the App Store · 2026

React Native, Expo, TypeScript, EAS, RevenueCat, App Store Connect

- Designed, built, and shipped a gamified iOS habit-tracking app solo — full ownership from concept and architecture through App Store release and post-launch iteration.
- Built a cross-platform React Native codebase with an XP, leveling, and daily-quest progression system, including local state management and persistent user data.
- Implemented subscription monetization end-to-end with RevenueCat (entitlement gating, custom paywall) and owned the full release pipeline: EAS build and submit, App Store Connect, App Review submission, and incremental updates driven by user-reported issues.

EDUCATION

Bachelor of Science (Honours), Computer Science | Ontario Tech University

Apr-2024

Awards: President's List (2021–2024) · NSERC Research Award Recipient
